At the Forefront of the African Energy Industry

The African Energy Chamber (AEC) is the voice of Africa’s energy sector.

As the leading chamber of successful networks, transactions and partnerships at the helm of Africa’s growing energy industries, the AEC actively promotes the interests of the African continent, its companies and its people.

Together, we can shape Africa’s energy future.

We believe that Africa is a powerhouse

We created the African Energy Chamber to promote growth in the African energy sector. By bringing multiple stakeholder forces together, we can help indigenous companies grow and encourage international entities to set up shop and operate in our continent. We encourage collaboration between businesses and government. We are taking a leadership role in shaping policies, sharing best practices, and using resources to create value for Africans.

By working together, we can bring Africa to the forefront of the energy industry.
We can overcome the “curse” associated with African oil and gas resources by encouraging responsible resource development and supporting business and people-friendly policies that discourage corruption, encourage local participation, encourage growth, promote rapid economic diversification, make it easier for investors to operate their businesses, attract investment, and enable all sectors of the industry to succeed.

African nations should focus on developing a natural gas market that will serve as the foundation of Africa’s energy industry. Instead of importing oil and LNG from abroad or competing with other countries for exporting contracts, we should focus on establishing a strong domestic trading market. Natural gas is one of our best chances to beat poverty and should be monetized via the development of petrochemicals, fertilizers and power plants that create jobs and value for our local economies.

The African energy sector should encourage the continued development of practical, effective policies that require foreign companies to hire local people, buy from local suppliers, promote more women, and work with local service providers. We work with governments and companies to develop local content policies that are effective and efficient in serving the interest of local communities.

Mining is a powerful, game-changing African industry with strong links to the energy sector that can create jobs and strengthen economies. It is also an industry that comes with its own unique set of challenges. We welcome mining companies to join African Energy Chamber and look forward to investing in the industry and working toward shared goals such as promoting on-the-job safety, sharing best practices, enabling access to affordable energy for miners and ensuring that workers have access to safe communities and comprehensive healthcare.
By combining our partners’ knowledge, skills, and expertise, African Energy Chamber can develop frameworks for solving Africa’s energy problems, creating jobs for African people, and empowering African communities. We will share that knowledge and continue to encourage growth through the development of training and education programs that will pave the way for African energy professionals to become industry leaders.

Gas flaring is harmful to the health of Africa’s people and its environment. It is also incredibly wasteful. Case in point: Nigeria, which is plagued with electricity shortages, flares more than 200 billion standard cubic feet of natural gas each year. If that gas were used to generate electricity, Nigeria would drastically improve its energy situation.

We will encourage our partners to implement digital solutions that make use of cutting-edge technologies, such as artificial intelligence and advanced analytics, that can help reduce costs, optimize the supply chain, and ensure more efficient resource extraction.

Green technologies and renewable energy sources are already a key to Africa’s energy infrastructure: In some countries, Africans get most or all of their electricity from renewable sources, such as hydropower or solar. And we predict that green energy and renewables will continue to play a significant role in the future of African energy.

Together, we can shape Africa’s energy future by promoting growth, fostering collaboration, shaping policy, and providing leadership and guidance in this fast-growing industry.
We believe in Africa, her people, her natural resources, and her potential. And we believe it is time for Africa to shine in the world energy market.

Energy investors can reap tremendous rewards in Africa - but, more importantly, they can play a considerable role in creating value for people, businesses, and communities where they set up shop.

We created the Chamber to foster collaboration among all stakeholders, to help us along this journey, and ensure that our projects come to fruition for the best outcome for our continent and its business community.

"The African Energy Chamber is a trusted partner in the promotion of African companies within the sector and a true supporter of Women in leadership roles; both at the regional and global stage."

Eng. Elizabeth Rogo, Founder & CEO, TSAVO Oilfield Services

**Indigenous companies can also make many positive impacts:**
- Creating jobs
- Providing training opportunities
- Building community partnerships
- Promoting economic development

**Governments have unlimited potential to make a positive difference:**
- Enacting supportive legislation
- Establishing beneficial tax and incentive policies
- Enforcing anti-corruption programs and local content policies
- Creating a framework for collaboration with other states and the business community

At the Forefront of the African Energy Industry
What we do for Africa

Strategic roadshows

To support government, national and private oil, gas and energy companies to raise capital and attract the right partners for their projects, we organize strategic roadshows in key investment hubs such as China, India, Singapore, Australia, North America, Western Europe, Russia and the Middle East.

“The African Energy Chamber was instrumental in making our EG Ronda 2019 Roadshow in Beijing a real success, ensuring we meet the right investment partners and working seamlessly with our team in Malabo. We are delighted to work with them again for our Year of Investment initiative in 2020.”

H.E. Gabriel Mbaga Obiang Lima, Minister of Mines and Hydrocarbons, Equatorial Guinea.

Investment Outreach

With Africa’s investors basket constantly diversifying and expanding, the African Energy Chamber undertakes a year-long active investment outreach program to key regions such as Asia (India, China, South East Asia), Russia, the Middle East and North America.

Our investment outreach strategy is focused on strategic and targeted working visits introducing Africa, its markets and investment opportunities to selected investors and companies.
Industry Knowledge

In Africa, where access to data and market information is a challenge for a lot of investors, we put our resources at the disposal of the industry to bring you the latest insights into the developments affecting the oil & gas sector.

Our annual African Energy Outlook has become a reference for the industry. As our partner, you also gain access to a series of leading insights and reports from the Chamber such as:
- Quarterly reports
- Industry newsletters
- Sector alerts

Our market knowledge and insights address core issues pertaining to Africa’s oil & gas sector such as local content, fiscal regimes and industry regulations, natural gas and climate change.

“This document is our analysis of where Africa’s oil and gas sector currently stands and our forecast of what 2020 holds.”

Verner Ayukegba, Senior VP for International Policy, African Energy Chamber

Networking functions

Whether in Dakar, Nairobi, Lagos or Johannesburg, we are present across the continent’s energy markets and are able to gather key industry stakeholders around the issues and topics that shape our industry.
Training and capacity building

Building up capacity across Africa’s oil & gas sector, supporting the development of local content and ensuring that industry growth leads to jobs creation is at the core of our mandate as a Chamber.

With our partners, we frequently organize workshop and training programs tailored to the needs of governments, national oil companies and the private sector on a wide range of topics including technical, legal and financial capacity building.

Policy implementation and advocacy

With our partners and network of experts across all fields of the oil & gas value chain, we support the development and implementation of key policies and regulations that make Africa a better place to do business while ensuring that local companies and communities benefit from the continent’s natural resources. From the development of energy and gas master plans to the implementation of local content strategies, the Chamber assist the public and private sector in all their policy needs in Africa.

“The African Energy Chamber is a true advocate of Africa on the international stage. Its constant efforts to put our continent at the forefront of global energy transformations will go a long way in giving Africa the representation it truly deserves as place of opportunity.”

H.E. Mohammad Sanusi Barkindo, Secretary General, OPEC
International events and forums

Whether through our own events or with our leading industry and events partners, we are part of the best international forums and investment conferences across Africa and beyond.

Our partners benefit from exclusive discounts to attend such prestigious global events, be part of the conversations shaping the future of Africa, and find the right opportunities to grow their businesses.

Become a partner

Africa’s energy sector is open for business. The African Energy Chamber is creating a positive and inclusive business environment for companies currently doing business in Africa, as well as companies interested in becoming a part of this dynamic industry and African governments.

We welcome:

**Oil and gas companies, including:**
- Upstream
- Midstream
- Downstream
- Service companies

**Mining companies**

**Power companies**

**Renewables companies**

**Government organizations**

**Investment banks and other financial institutions**

**Legal and other advisory firms**
Why join?

Partners of the African Energy Chamber have the power to shape Africa’s energy future by promoting growth, fostering collaboration, shaping policy, and providing leadership and guidance in this fast-growing industry.

**Partners have access to unique opportunities and exclusive benefits including:**

- Wide network of contacts and potential investors for the African energy industry
- Access to a pool of policy makers and seasoned experts in the African energy industry
- Wide media coverage within Africa and beyond
- Special access to AEC stakeholders
- Access to AEC information database, industry events and updates.
Together, we can shape Africa’s energy future.
